

Energy Policy

As UK's leading producer aluminium, Novelis Latchford is fully committed to continuous, progressive and sustainable improvement in the energy efficiency of our production processes, through which we aim to achieve or surpass the energy and greenhouse gas (GHG) reduction targets established in relation to our Climate Change Agreement and Novelis' energy efficiency programmes.

We recognise that energy management is a key factor in achieving our overall business objectives, as well as a responsibility to our employees, stakeholders and to society in general. Every Novelis Latchford employee is expected to actively support this policy and to implement the following guiding principles:

Our guiding principles

- Integrating energy efficiency as an essential part of Novelis Latchford's management and decision-making process.
- Operating our processes in accordance with an environmental management system, that is independently accredited to ISO 14001.
- Performing regular planned inspection and maintenance of plant and equipment to ensure optimum performance.
- Maintaining an energy plan to achieve our specific energy reduction targets.
- Monitoring, recording, evaluating and auditing energy usage throughout our operations.
- Continuously seeking ways to enhance and improve energy efficiency where this is economically feasible
- Keeping abreast of technological advances and giving due consideration to energy efficiency as a priority when evaluating new investments.
- Promoting awareness, understanding and responsibility among our employees with respect to climate change and the need for energy efficiency.
